An Open Invitation Letter to all Stakeholders and Political candidates. Yucca Mountain Application Review Process Survey

Our mission is nuclear advocacy and educating the grassroots public about the science and engineering behind the Yucca Mountain Application Review Process at the Department of Energy and the Nuclear Regulatory Commission.

***"Although I am uncommitted on Yucca Mountain as a nuclear storage facility,
I believe that the Department of Energy & NRC
Yucca Mountain Application Review Process should be completed".***

Dear Friends:

We are asking all stakeholders and political candidates who are willing to go on record to **support the NRC's completion of the Yucca Mountain Application Review Process.**

It is the opinion of USNEF and dozens of industry groups and associations that our need to COMPLETE the application review process, the results of many years of scientific & engineering study commissioned by Congressional law. This review should be completed in order to determine the studies ability to secure the safety and sustainability of the facility. Completion of the application would establish “if” it would be safe for construction, it does not establish construction but the completion of the pathway to construction.

If you agree to completion of the Application Review Process, please indicate by signing below accordingly.

Signature: “I _____ support the NRC’s completion of the Yucca Mountain Application License, providing the application documentation supports the **safe operation and sustainability** of the Yucca Mountain nuclear storage facility”.

Print name: _____ .

It is very important that you respond to this survey in order for us to establish a representation of the stakeholders, candidates and elected officials who support completion of the process. You can return this by email to: comments@usnuclearenergy.org or postal mail to **USNEF, PO Box 2867, Sparks, NV 89432-2867.**

Additional information about Yucca Mountain and our nuclear advocacy website at:

<http://www.usnuclearenergy.org> and our **YES Symposiums** website at: <http://usnuclearenergy.org/yes/default.html>

These are the **facts**, the grassroots public should know about Yucca Mountain: It is a thirty + year study by **8 of Americas national laboratories**, input and review recommendations from more than **100 US colleges** and universities with a taxpayer investment into the study of more than **\$10 Billion**. The license application study was **reviewed by more than 200 scientists and engineers** at the Nuclear Regulatory Commission with **no disqualifying elements found**. To put it bluntly, political opposition to such an encompassing study carries little merit. Nearly every stakeholder in the world managing nuclear waste observed the Yucca Mountain study application process. The degree and FACTS of this study are overwhelming.

Our current survey posting is available at: <http://www.usnuclearenergy.org/Yucca-APP-Supporters.htm>
