

Nuclear Advocacy Through
Grassroots Education

US Nuclear Energy Foundation

Yucca Mountain is not as Yucca as you have been told!

When the DOE Yucca application was submitted to the NRC, the Executive Summary established that the long time study had proved that it was SAFE and would complete its repository function.

The only way that Nevada bureaucrats could roadblock completion of the DOE application “study” was to defund it!

*If we are ever able to guide our
bureaucrats back to truthful
representation, our citizens must step up
and expose the TRUTH!*

Regardless of the passion that politicians may have for renewable energy; science and economics show that solar and wind struggle to compete with advanced *renewable Nuclear Energy*. Environmentally, nuclear is cleaner, safer and much more reliable than most renewable sources. The nuclear fuels uranium and thorium are limitless and accordingly, nuclear energy should be classified as a **RENEWABLE!**
